

In case of fire, is your safety hanging by a wire?

Avoid a failure to communicate...

ensure you still get fast fire alarm response

even if old phone lines
are down, damaged
or discontinued by
the phone company

StarLink Fire

Protect Yourself from a Failure to Communicate in a Fire Alarm Emergency...

Traditionally, in the event of fire, your business' fire alarm system detects it, and reports it via phone lines, to get you urgent response from the proper authorities.

But did you know, every day more of those old expensive leased phone landlines are being damaged, by storm or accident, and not replaced, but "retired", i.e., no longer repaired by the phone company jeopardizing response to your emergency?

The Days of Old Phone Lines Are Numbered!

- #1** As of Jan 2018, telephone companies were no longer required by the Government to maintain or keep POTS or PSTN lines working
- #2** In the event of a storm or accident, phone lines prone to damage, are no longer replaced
- #3** Old phone lines and networks are too expensive for phone companies to fix/maintain and are being retired or phased-out region by region, right now
- #4** Because the supply of POTS/PSTN landlines is low, costs are increasingly high

...but now you have the ability to replace POTS with cellular/IP and save thousands of dollars each year with StarLink Fire
