

# In case of a fire alarm emergency, is your safety hanging by a wire?

Ensure help is on the way & avoid a failure to communicate

**Get the fastest possible fire alarm response**

even if old phone lines or old networks are down, damaged, sunsetted or discontinued by the phone company

# StarLink<sup>\*</sup> Fire

# StarLink Fire

Each StarLink Fire<sup>®</sup> Communicator replaces two phone lines per Fire Alarm Panel (any brand), for 2x the Savings - often thousands of dollars annually

## Protect Yourself from a Failure to Communicate in a Fire Alarm Emergency...

Traditionally, in the event of fire, your business' fire alarm system detects it, and reports it via phone lines, to get you urgent response from the proper authorities.

But did you know, every day more of those old expensive leased phone landlines are being damaged, by storm or accident, and not replaced, but "retired", i.e., no longer repaired by the phone company, jeopardizing response to your emergency? Even some original cellular networks are being sunsetted and obsoleted, to make room for more data and that equipment now needs upgrading.

**Check with a fire alarm professional for your system's effective status.**

## The Days of Old Phone Technology are Numbered

- #1 As of 2018, telephone companies were no longer required by the Government to maintain or keep POTS or PSTN lines working
- #2 Old phone lines (and even the original cell networks) are too expensive for phone companies to fix/maintain and are being retired/phased-out or sunsetted, region by region, now with little or no warning
- #3 In the event of a storm or accident, phone lines and old towers often prone to damage, are no longer replaced
- #4 Because the supply of POTS/PSTN landlines is low, costs are increasingly high

## Introducing StarLink Fire LTE Cellular:

**The low-cost, no-fuss solution to replace POTS and old or sunset phone technology with today's cellular/IP... and save thousands of dollars each year over landlines**

## ...Add StarLink Fire, Save Time & Money

### You Don't Need a New Fire Alarm System, Just a New Way of Communicating

StarLink, a leader in universal wireless alarm communications, created a simple cost-effective add-on, that will upgrade your current fire alarm system for the 21st Century and beyond, using today's fastest and best cyberprotected digital cell and/or IP networks, for fire alarm reporting and emergency response. On top of that, we will save you hundreds or thousands of dollars every year, replacing those undependable, vanishing POTS/PSTN lines, with proven wireless reporting, while meeting today's UL and NFPA National & Local Fire Codes.\*

### Keep All Secure & Protected: Upgrade Any Fire Alarm System to Today's Top Wireless Communications & Save Time & Money Every Year vs. Old Leased Phone Landlines

Keep your premises, property, business, staff, & customers safe with round the-clock professional monitoring and faster emergency response for your Fire Alarm, old or new, without rewiring or replacing it. StarLink Fire Universal Wireless Alarm Communicators connect your business to the proper authorities seamlessly. We use today's largest, multibillion dollar cyber protected cellular/IP networks, instead of relying on old POTS phone lines that can be cut, down or plain old gone. We'll get you the help you need in any emergency, quickly and reliably.

**Your Security is our #1 Priority.**
