

Stay Connected in a Lifesafety/Fire Alarm Emergency

Ensure first responders
rush in response

Safeguard staff, clients
& premises

StarLink Fire LTE

Avoid a failure to communicate...

Ensure you still get fast emergency & fire alarm response

as cellular carriers
change and
discontinue older
cellular networks, i.e.
3G and CDMA

Cellphone technology is really a necessity for everything... including your fire alarm system.

Calls, texts, emails & apps all create huge cell-network demands. To keep up, phone companies continue to change technologies & towers, obsoleting the old to make room for the new. It's called sunseting.

When **3G & CDMA Networks** are sunsetted, devices using those technologies can become slow to work, or suddenly won't work at all – including not sending fire alarms.

StarLink  **Fire** LTE

Remember, in place of old phonelines, your fire alarm system uses cellular technology, too. And now, that needs an upgrade.

Today, using the cellular network, your fire alarm system reports emergencies and gets you the first response and help you need quickly. However, due to the recent phone company network changeovers, bandwidth-harvesting, and 3G & CDMA sunsets, it needs upgrading now — to ensure it keeps on working reliably and performing its critical job, i.e., safeguarding life, employees, clients & property, promptly in any emergency.

DON'T LET YOUR FIRE ALARM SYSTEM GO OFFLINE

No, you don't need a whole new fire alarm system, just a **no-fuss, no-mess cellular communicator update** to keep it working with today's cellular networks, and ensure it keeps reporting fire alarms & sending for help in an emergency.

Keep All Secure & Protected
Get the fastest possible alarm response using today's largest cellular networks

We'll keep your premises, property, business, staff, & customers safe with round the-clock professional monitoring and faster emergency response for your fire alarm, using today's latest LTE cellular technology. StarLink Fire Universal Wireless Alarm Communicators connect your business to the proper authorities seamlessly. We use today's largest, multi-billion dollar cyber-protected cellular/IP LTE networks. We'll get you the help you need in any emergency, quickly and reliably.

Your Safety is our #1 Priority.
